

SANDELL'S REMOVABLE EXPANSION JOINT CAP

Product Name:

Sandell's Removable Expansion Joint Cap

Product Description:

Sandell's Removable Expansion Joint Cap is a flexible, highly resilient PVC or polystyrene product that is used to form and fill horizontal and vertical joint applications in construction. It is ideal for molding concrete to maintain uniform edging, and a clean appearance.

Available Sizes:

- ❖ 1/2" x 1/2"
- ❖ 3/4" x 1/2"
- ❖ 1" x 1/2"

Available in:

- ❖ 10' lengths
- ❖ 500 feet per box

Use:

Prior to concrete placement, Sandell's Removable Expansion Joint Cap is installed on top of the existing expansion joint material. Once the concrete has been poured and is set, precise horizontal and vertical intersections are formed within the concrete. With little clean up, the "Removable" top is then snapped off without any effort, and the result is a permanent channel, ready to receive caulk or sealant. Sandell's Removable Expansion Joint Cap can be used in any depth, as well as with any other expansion joint product.

Warranty:

Sandell's Removable Expansion Joint Cap carries a manufacturer's warranty of material specification compliance.

Maintenance:

Sandell's Removable Expansion Joint Cap should not require maintenance if installed in accordance with Sandell specifications and instructions.
