

SANDELL'S PLASTIC WEEP TUBES

Sandell®'s Round Plastic Weep Holes

Product Description:

Sandell®'s Round Plastic Weep Holes have a distinct opening that permits moisture to migrate immediately out of cavity wall construction, while at the same time promoting proper air movement.

Use:

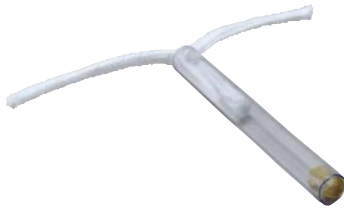

Sandell®'s Round Plastic Weep Holes are used to channel moisture to the exterior of a structure through planned openings within the wall. Sandell®'s Round Plastic Weep Holes are extremely durable being completely composed of clear pvc. Upon installation Sandell®'s Round Plastic Weep Holes should be protected from damage, and free from dirt, oil and concrete droppings. Damaged weep devices should never be used in any structure. The location of the weep device placement should be according to the detailed drawings to insure proper positioning within the masonry joint. Sandell®'s Round Plastic Weep Holes should be typically installed flush with the outside joint and the opposite end should extend into the cavity. Care should be taken during mortar placement as not to disrupt the weep hole or obstruct its opening.

Available:

- ❖ With or without Wick and/or Screen

Rectangular Plastic Weep

Round Plastic Weep with wick & screen*
(available with or wickout wick and/or screen)

Sandell®'s Rectangular Plastic Weep Tube

Product Description:

Sandell®'s Rectangular Plastic Weep Tubes have a wide rectangular opening that permits moisture to migrate immediately to the exterior of the structure, while encouraging the proper movement of air.

Use:

Sandell®'s Rectangular Plastic Weep Tubes are used to direct moisture to the exterior of a structure through planned openings within the wall. Sandell®'s Rectangular Plastic Weep Tubes are extremely durable being completely composed of clear pvc. Upon installation Sandell®'s Rectangular Plastic Weep Tubes should be protected from damage, and free from dirt, oil and concrete droppings. Damaged weep devices should never be used in any structure. The location of the weep device should be according to the detailed drawings. Sandell®'s Rectangular Plastic Weep Tubes are placed within the joint, and their distinctive rectangular design allows them to fit accurately between masonry. Sandell®'s Rectangular Plastic Weep Tubes should be typically installed flush with the outside joint and the opposite end should extend into the cavity. Care should be taken during mortar placement as not to disrupt the weep tube or obstruct its opening.

Warranty & Maintenance:

Sandell®'s Plastic Weeps carry a manufacturer's warranty of material specification compliance. Sandell®'s Plastic Weeps should not require maintenance if installed in accordance with Sandell®'s specifications and instructions.
